Subject: 70 AMP RELAY HARNESS ASSEMBLIES

The following 70 Amp relay harness assemblies have been designed as an option to replace the standard CTD electrical panels from a 40 Amp relay assembly to a 70 Amp relay assembly.

1. 22-62210-00 is the harness assembly designed as an option to replace the standard CTD electrical panel from a 40 amp evaporator relay assembly to a 70 amp relay for all 12VDC EM-1/9 evaporator applications. Assembly includes the relay, (10-00328-00) and re-uses the existing circuit breaker on the panel. Circuit breaker rating on CTD electrical panels should not be increased unless all wire sizes are increased appropriately.

2. 22-62210-04 is the harness assembly designed as an option to replace the standard CTD electrical panel from a 40 amp condenser relay assembly to a 70 amp relay for all 12VDC CM-2/3/14 condenser applications. Assembly includes the relay, (10-00328-00) and re-uses the existing circuit breaker on the panel. Circuit breaker rating on CTD electrical panels should not be increased unless all wire sizes are increased appropriately.

Both 70 amp relay harness assemblies can be ordered from PPG Syracuse, (800) 255-7382.

Please contact Carrier Transport A/C Service Hot Line at (800) 450-2211 with any questions.
